61-18673

Trans. of Zhurnal Nauchnoi i Prikladnoi Fotografii i Kinematografii (USSR) 1960, v. 5, no. 3, p. 221-223.

DESCRIPTORS: Electron diffraction analysis, *Photographic emulsions, *Beta particles, Infrared images, Optical images, Temperature, Ions, Ionization.

The relationship between the reciprocity effect and temperature, which is of special importance for the fading process, was investigated. Results showed that the activation energy determined in the case of the effect of ionizing particles by the isodensity curves, can be used as a measure of dispersion of the latent image. (Materials--Photographic, TT, v. 6, no. 10)
